

Psychometric Preparation for Digital Transition

- Psychometric Training 2016
- Ou Zhang

Today's topic

- History: Paper-Pencil Era, variable map
- Digital Transition
- Content Ingestion Tool (CIT)
- Project Rex (Q-i simulator on PC)
- Using JSON output to verify the variable list

History

- **Paper-Pencil Era**

- Materials Needed

- Manual
- Stimulus Books
- Record form
- Variable list (created by Psychometrics)
- Variable map (connects the record form)

- What you need to do:

- Get familiar with the test
- Understand the administration rules
- Learn the content in detail
- Know the Score flow

History (cont.)

- Paper-Pencil Era (Variable map)

record form

SAS Variables	Description	Type Of Data	Acceptable Value
Non-Page variables			
wais5_teid	Test event ID	numeric	0-999999
wais5_eid	Consent form ID (cfid)	numeric	0-999999
wais5_cf	Clinical Case	numeric	0,1-9
wais5_sex	Sex	string	M,F,-9
wais5_hand	Handedness	numeric	1,-1,-9
wais5_doty	Test date year	numeric	2016
wais5_dotm	Test date month	numeric	1-12
wais5_dotd	Test date day	numeric	1-31
wais5_doby	Birth date year	numeric	1900-2016
wais5_dobm	Birth date month	numeric	1-12
wais5_dobd	Birth date day	numeric	1-31
wais5_pl	Prescription lenses	numeric	0,1
wais5_plw	Prescription lenses wearing	numeric	0,1
wais5_ld	Assisted listening device	numeric	0,1
wais5_ldw	Assisted listening device wearing	numeric	0,1
wais5_vvw	Verbatim wearing	string	alphanumeric;-,-9
wais5_at	Answer to alternate item	numeric	1,-1,-9
wais5_gn	General Notes	string	alphanumeric;-
Subtest variables			
wais5_mr_st	mr Subtest Start Times	string	HH-MM-SS.99-9

Variable list

1. Matrix Reasoning (MR)

Start Sample Items A & B, then Item 3

Reverse Imperfect score on either of the first two items gives, go to Item 1 and administer in forward sequence.

Discontinue After 3 consecutive scores of 0

Record & Score Record subtest start and stop times. Circle response. Correct responses are in bold. Circle DK and NR, as appropriate. Score 0 or 1 point.

Item	Response	Score	Item	Response	Score
SA	wais5_mr_rsa	4	10.	1 2 3 4 5	DK NR 0 1
SB	wais5_mr_rsb	4	11.	1 2 3 4 5	DK NR 0 1
1.	wais5_mr_r01...	5	12.	1 2 3 4 5	DK NR 0 1
2.	1 2 3 4 5	DK NR 0 1	13.	1 2 3 4 5	DK NR 0 1
3.	1 2 3 4 5	DK NR 0 1	14.	1 2 3 4 5	DK NR 0 1
4.	1 2 3 4 5	DK NR 0 1	15.	1 2 3 4 5	DK NR 0 1

Variable Map

Digital Transition

- What Psychometrics needs to do to fit into this digital transition?
 - Get familiar with the test
 - Understand the administration rules
 - Learn the content in detail (subtests, items, design)
 - Know the Score flow
 - Learn how the test is being administered on Q-i
 - Learn how the output variables reflect the feature of the digital administration software (Q-i)
- But for the digital assessment (especially development phases), the traditional materials may not be available.
 - ~~Manual~~
 - ~~Stimulus Books~~
 - ~~Record form~~

Digital Transition (cont.)

- Paper vs. Digital

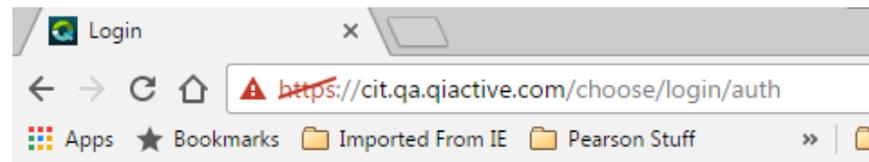

Things you need to know	Materials & Tools	
	Paper	Digital
Get familiar with the test	Manual/Stimulus book	CIT
Understand the administration rules	Manual/Record form	CIT/ Project Rex
Learn the content in detail	Manual/Stimulus book	CIT
Know the Score flow	Scoring specs/Record form	CIT/ Project Rex
Learn how the test is being administered on Q-i	----	Project Rex
Learn how the output variables reflect the feature of the digital administration software (Q-i)	Data from Rapid	JSON output

Content Ingestion Tool (CIT)

The CIT is a platform used by RDs and Engineers to communicate how the test is being designed/built on Q-i.

[Proceed to cit.qa.qiactive.com \(unsafe\)](#)

Content Ingestion Tool (cont.)

After logging in, click on the expansion button (+) next to the test name.

The screenshot displays the 'Q-interactive Content Tool' interface. On the left, a 'Test Navigation' sidebar lists various tests, with 'WAIS-IV' circled in red. The main content area is titled 'WAIS-5' and includes a 'Media Library' section with tabs for 'Test Info', 'Instructions', 'Description', 'Scales', 'Sort Order', 'Test Grouping', 'Education', 'Observations', and 'History'. The 'Sort Order' tab is circled in red. Below the tabs, a 'Subtest order' section contains a list of subtests with drag-and-drop handles:

Subtest order	
Drag and Drop the Below Items to reorder	
Set Relations	⬆️⬇️⬆️
Digit Span	⬆️⬇️⬆️
Vocabulary	⬆️⬇️⬆️
Block Design	⬆️⬇️⬆️
Matrix Reasoning	⬆️⬇️⬆️
Symbol Search	⬆️⬇️⬆️
Similarities	⬆️⬇️⬆️
Visual Puzzles	⬆️⬇️⬆️
Symbol Span	⬆️⬇️⬆️
Coding	⬆️⬇️⬆️

Content Ingestion Tool (cont.)

Then, Click the expansion button (+) to expand/compress the test to subtest level.

There are **13+** tabs of subtest information. Click through each tab to explore.

I've found “**iButton**” and “**Rules**” provide the most information related to test administration/scoring.

WAIS-5

- ⊕ Set Relations
- ⊕ Digit Span
- ⊕ Vocabulary
- ⊕ Block Design
- ⊕ Matrix Reasoning
- ⊕ Symbol Search
- ⊕ Similarities
- ⊕ Visual Puzzles

- ⊕ Figure Weights
- ⊕ Response Booklet Symbol Search
- ⊕ Arithmetic
- ⊕ Response Booklet Coding
- ⊕ Auditory Working Memory

WAIS-5 -> Vocabulary

The screenshot displays the 'WAIS-5 -> Vocabulary' page. At the top, there is a navigation bar with tabs: Basic Info, Metadata, Item Group Sort Order, Overview, iButton, Instructions, Speech Bubble, Contextual Events, Rules, Skills Analysis, Snippets, and Observations. Below this is a 'History' section. The main content area is titled 'Item Group Sorter' and contains the instruction 'Drag and Drop the Below Items to reorder'. There are two items listed: 'Item 1' and 'Items 2-16', each with a plus sign icon to its right.

Content Ingestion Tool (cont.)

Then, Click the expansion button (+) to expand/compress the subtest to the item level.

There are **multiple** tabs of item information. Click through each tab to explore.

The “**Scoring Method**” provides the most information related to item scoring.

The screenshot displays the 'Scoring Method' tab in the Content Ingestion Tool. The 'Scoring Method' tab is highlighted with a red circle. The main content area is titled 'Picklist' and features a 'List Type' dropdown menu set to 'Pick List'. Below this, there is a section for 'Math ML Help' with a 'Use Editor for Answer Text' checkbox. The 'Answer Groups' section shows three existing groups: '0 Point Answer Group', '1 Point Answer Group', and '2 Point Answer Group'. A green button labeled 'Add New Answer Group' is located at the bottom of the list.

Content Ingestion Tool (cont.)

In order to understand the test, the most important thing is making sure to click on every possible field while exploring all subtests, item groups and items. Andrea has created a separate slide with more details concerning the available information ([K:\flea market\q-i training](#)).

Let's go to the website for a demo.

Link: <https://cit.qa.qiactive.com/choose/login/auth>

Project Rex simulator (Q-i)

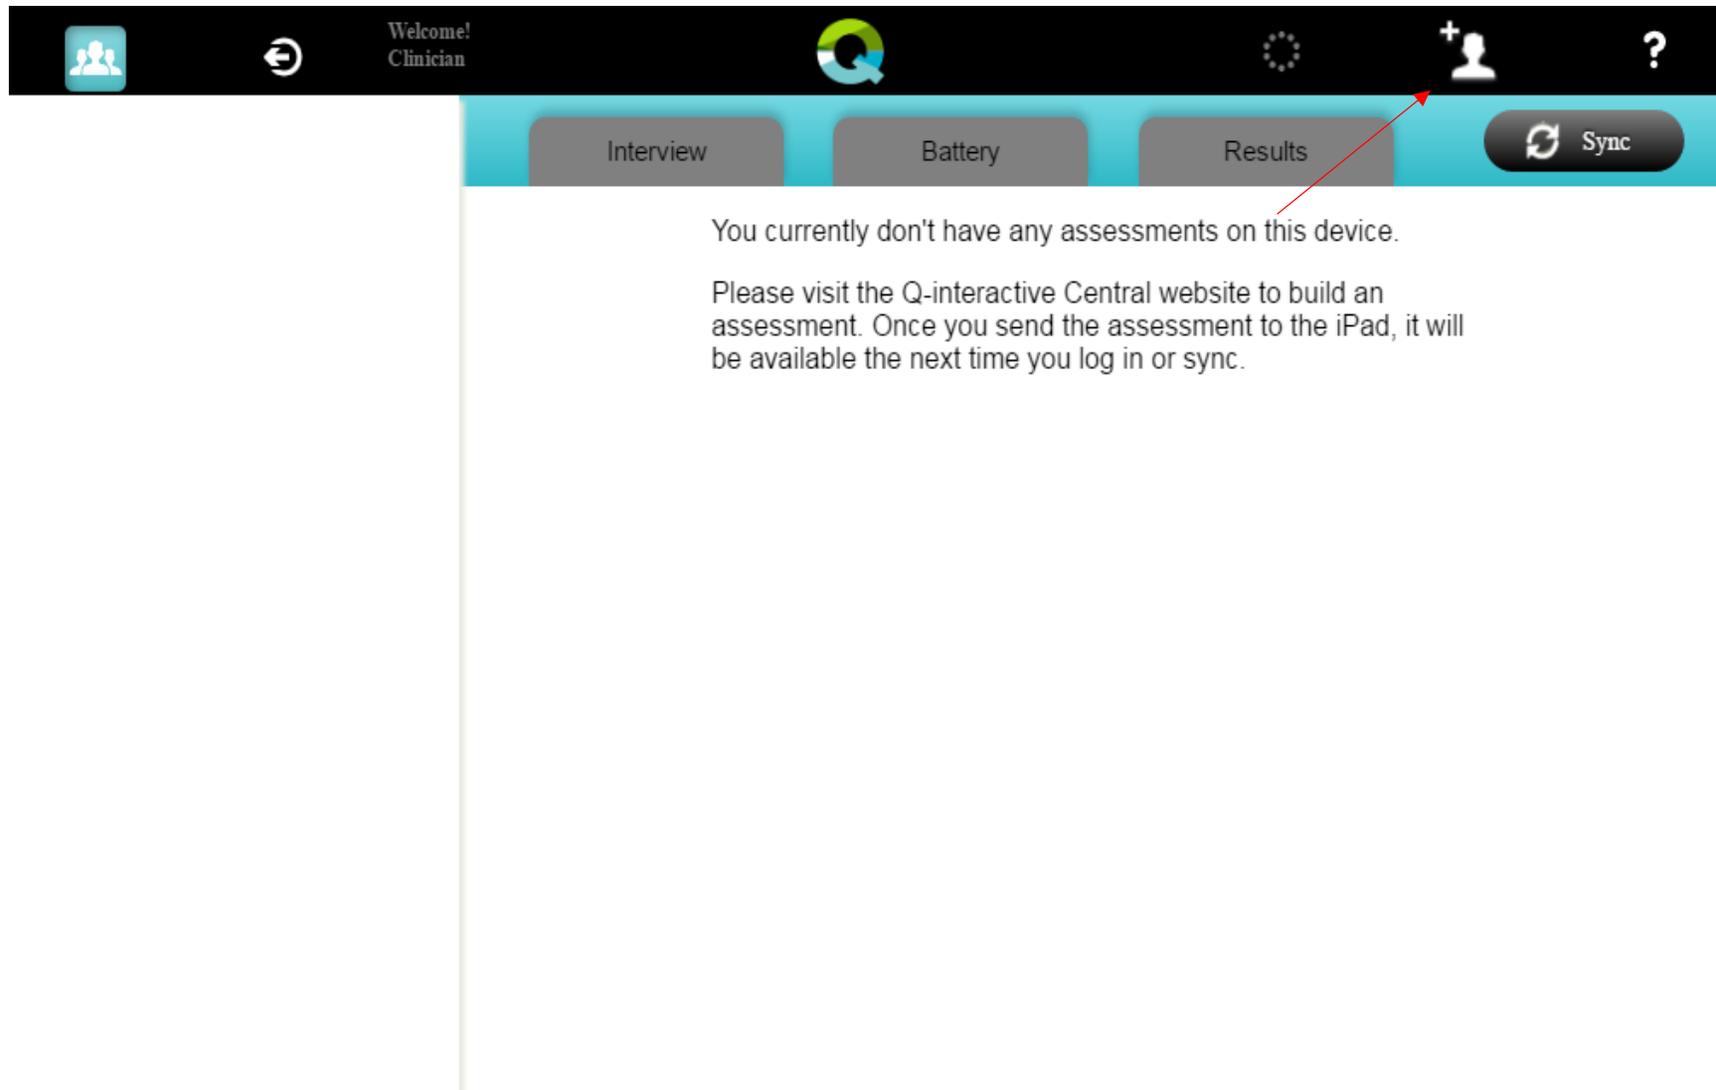

- Project Rex a simulator you can run on your computer that mirrors Q-interactive. It helps Psychometrics understand the administration rules, score flow, and to know how the test is truly being administered on Q-i.
- It helps with all of the variable list/mapping.
- It also helps with creating system cases and edge cases.

Link: http://10.72.2.226/homeUI_en.html

- What you need to learn today?
 - How to run Project Rex on PC
 - How to start/stop the stopwatch for timed subtests so that the entire subtest items are simulated
 - How to pull your simulated JSON results

Project Rex simulator (cont.)

- **Step 1:** Open in the browser and click the little man on the top right

Project Rex simulator (cont.)

- **Step 2:** Fill in the following blank cells with mock information:

- Examinee
- Examinee ID
- DoB (optional if you are using information from the subject)
- Battery ID

The screenshot shows a mobile application interface for a 'New Client Information Form'. The form is titled 'New Client Information Form' and has a 'Paste Battery Json' button. Below the title, it states 'All fields are required'. The form contains several input fields, each with a red circle around its label:

- Examinee:** Input field containing 'Ou'.
- Examinee ID:** Input field containing '1234'. Below this field is a red note: '(One or more alphanumeric characters)'.
- Scheduled Test Date:** Input field containing '09 / 29 / 2016'.
- Scheduled Test Time:** Input field containing '09 : 11 AM'.
- DoB:** Input field containing '12 / 14 / 2009'.
- Gender:** Dropdown menu with 'Male' selected.
- Battery ID:** Input field containing '1234'. Below this field is a red note: 'Please uniquely identify this test. Identifier must be at least three characters long.'

At the bottom of the form, there are two buttons: 'Cancel' and 'Add'.

Project Rex simulator (cont.)

- **Step 9:** Make sure the subtest is fully administered (see the summary page)

The screenshot shows the 'End of Subtest' summary page for the WISC-V-Spanish Symbol Search Touch subtest. The page is titled 'WISC-V-Spanish Symbol Search Touch End of Subtest' and includes a 'Results' button in the top right corner. The subtest name 'Symbol Search Touch' is displayed with a score of '-'. Under the 'Item Raw Scores' section, three items are listed: 'Symbol Search Touch A: Demonstration Items' (score: -), 'Symbol Search Touch A: Sample Items' (score: -), and 'Symbol Search Touch A: Test Items' (score: 68). The 'Additional Measures' section shows 'Subtest Completion Time: 20 min. 58 sec.' and 'Average Subtest Completion Time: 3 min.'. The 'Notes' section lists 'General Notes: -', 'Subtest Notes: -', and 'Item Notes: -'. The 'Rules Triggered' section shows 'Discontinue Used: No' and 'Reverse Used: No'.

```

Project Rex simulator (cont.)

- **Step 10:** Multiple ways to save your results in JSON file (**option 2**)

- Go to Application\Session Storage\ BatteryToRun\ Value, then Copy/Paste files to your JSON editing tool.

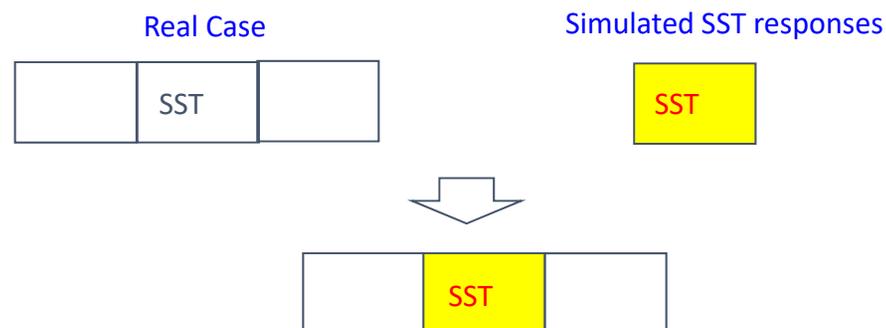

A separate document has been created with more details ([K:\flea market\q-i training](#)).

Project Rex simulator (cont.)

- **Summary**

- Project Rex can help you create cases with specific conditions.
- Pausing the stopwatch helps you complete the entire timed subtest.
- The simulated cases (JSON output files) can be easily used/modified as system cases.
- **Example: WISC5 Spanish-Symbol Search Touch (SST) 1-75 items (form B)**
 - The maximum item number in the real sample data is 53. So, the system variables from item 54 to item 75 are missing. The fully-administered simulated cases are used to replace all the responses for the SST.

Using JSON output to verify the variable list

- Original .json File in Notepad (WISC-V Spanish Example)

```

Using JSON output to verify the variable list (cont.)

Example: WISC-V Spanish Block Design Item 13

Psychometrically, we assume there might be **9 variables** related to this item, because there are **9 blocks** involved.

Using JSON output to verify the variable list (cont.)

The fact is, there are 25 JSON variables related to this item. So, we need to create 25 variables to meet psychometric-system variable one-on-one connection requirement.

The diagram illustrates the mapping between JSON data and a variable list. On the left, a JSON tree shows a subtest object with various fields. A red arrow points from the 'derivedState' field to the 'data' field of the 'blocks' array in the middle JSON snippet. Another red arrow points from the 'blocks' array to the 'Variable Name' list on the right. A third red arrow points from the 'rotation' field to the bottom of the variable list.

Using JSON output to verify the variable list (cont.)

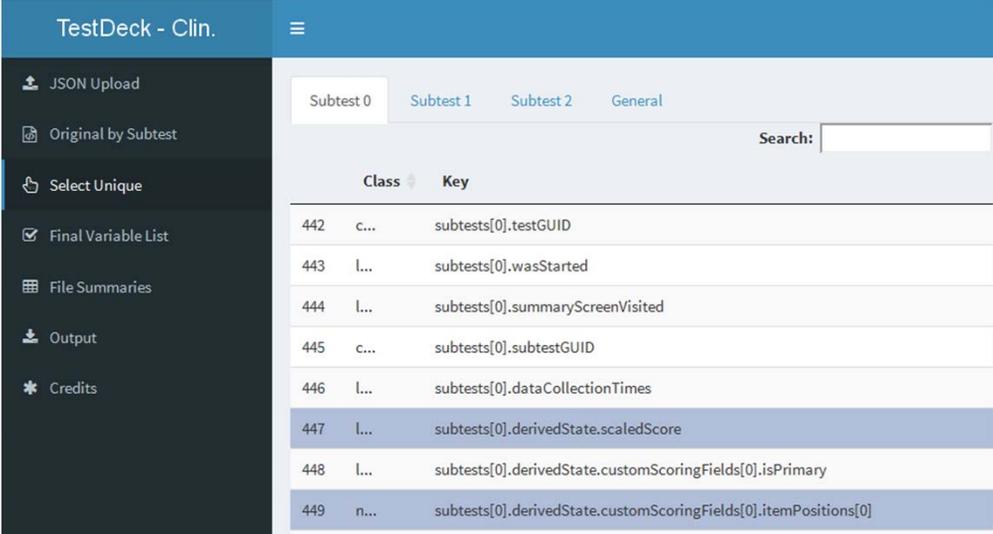

Rules To Follow

1. The Psychometric variable list must reflect the feature of the system variables from digital administration software so that the psychometric-system variable **one-on-one** connection requirement is met
2. In the future, what value/variable type you see in the Q-i output file, will be directly mapped to the psychometric variable.
3. Psychometrics will no longer ask Field Research team to convert value/variable type/variable pattern for us.

Ben created a separate slide for this part with more details ([K:\flea market\q-i training](#)).

Functions under development

1. Variable list/map mapping tool ([Ben & Ou](#))

	Class	Key
442	c...	subtests[0].testGUID
443	l...	subtests[0].wasStarted
444	l...	subtests[0].summaryScreenVisited
445	c...	subtests[0].subtestGUID
446	l...	subtests[0].dataCollectionTimes
447	l...	subtests[0].derivedState.scaledScore
448	l...	subtests[0].derivedState.customScoringFields[0].isPrimary
449	n...	subtests[0].derivedState.customScoringFields[0].itemPositions[0]

2. CIT-Master specs procedure exploration ([Ou](#))
3. Universal sas macro for parsed json/sas data conversion ([Wendy & Ou](#))
4. JSON/Aurora data comparison code/tool ([Ben & Ou](#))
5. System case simulation, converting input format file for digital platform application ([Suping, Ou, Ben](#))
